

ABSTRACT

A fastener for attaching a button or similar item to a piece of fabric or a garment is provided. The fastener may include a base and connected to the base may be a plurality of legs where each leg may extend downwards from the bottom surface of the base. Each of the plurality of legs may be designed to pass through one of the plurality of holes of a button and then may pass through the fabric. Additionally after passing through the fabric, each of the plurality of legs is capable of being bent over or pushed backward to secure the button to the garment.
